Range	-	700 km
Crew	-	1
Payload	-	10 troops
Engine	-	Diesel
Weight	-	25 tons
Entered service	-	2007
In use by	-	Germany, Italy and Lebanon.

### **Additional info:**

The GFF4 (Geschützte Führungs- und Funktionsfahrzeuge, Klasse 4) is a medium weight MRAP armored personnel carrier.

The chassis is based on the 6x6 Trakker from IVECO.

The vehicle is protected in all directions. The driver's station and crew compartment are protected against improvised explosive devices, projectiles, missiles and mines. The cell's frame also forms a roll cage. The engine compartment and transmission are armored to reduce the chance of a mobility kill under attack.

The vehicle can be produced in several configurations. Because its design is based on a modular concept, a smaller 4x4 or larger 8x8 variant, with corresponding payloads are possible.

Italy has produced a similar vehicle with the 4x4 chassis called by Italian army VTMM (Veicolo Tattico Medio Multiruolo) Orso (Bear).
